### Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 8. Claims 23 and 26 are rejected under 35 U.S.C. § 102(b) as being anticipated by Yasui US Patent No. 4,769,713. When the clock VCK is applied to the address counter the address counter is reset, resulting in a time period when no addresses are being applied to the frame memory. This would produce a time period when no display signal is being applied to the display panel. At the same time that the clock VCK is applied this clock VCK is applied to the reset terminal of the row scanning generator of the matrix display. This would produce a time period when no row address signal is being applied to the display panel. This in combination with the absence of a display signal would create a time period when an absence of an electrical potential would exist between the electrode of the matrix display.
- 9. Claims 1-12 are allowable over the art of record.
